Cole – Born Sinner (Deluxe Version)" in high quality & quality format. We also recommend to Download Album "J. Cole – Born Sinner" (Deluxe Version)" in MP3 format (320 kbps) in order to have a better experience. Thank you for visiting my Blog and reading this "Born Sinner (Deluxe Version)" review (J. Cole – Born Sinner (Deluxe Version)) "Q: How to manage emacs auto-complete-mode? I am using auto-complete-mode and I run into a problem with it. In a big project I have hundreds of "low-level" functions that are all documented and only in the header files. For example, I can do M-x doc-info-search-p and get a list of all the functions that are documented. This list includes the specific function I am looking at, and a hyper link to the documentation for that function. The problem is, after I hit tab twice, it auto-completes to a list of functions that are in another header file. How can I change that behavior so that it only completes to the documentation for the current function I am in? EDIT: to clarify what I want, here are some examples: Consider the following code: int func( void ) { printf( "Hello World! "); return 0; } It is in a header file named foo.h, and I have not declared this function anywhere else. If I do M-x auto-complete-mode and start to type the "f" in "func", I expect auto-complete to complete to a list of all the functions in foo.h. It seems like emacs is trying to complete to my global definition of func(void) instead of my local one. I want to avoid having to type the full name of my function every single time. What I have been doing is I just highlight the function and hit C-x C-e, which takes me to the documentation. This is good, but I feel like that is just a band-aid. I really would like to have auto-complete automatically show me the documentation for the function I am working on, rather than all functions in the project. 82157476af
